

ADVANTAGES

- Low pressure loss
- Optimized filter life
- Short delivery times
- Direct fit replacement
- Best separation efficiencies with high dust loads
- Durable synthetic filter media with various coatings or membranes

Application	Camfil´s retrofit filter plates can be used for the dedusting of various industrial manufacturing processes like metal processing, food processing, chemical and pharmaceutical processes.
Installation Options	Direct fit replacement due to different sizes and flanges for various makes and models such as Donaldson, Keller Lufttechnik, Herding, WAM, Nederman or Infestaub.
Comment	The Dura-Pleat filter plates are made of spunbonded polyester and can help to optimise the efficiency of your dust collector with their low pressure loss, long filter life time and high separation efficiency. Dura-Pleat media is available with various properties including anti-static, water and oil repellent or PTFE Membrane for handling sticky dusts, improved dust release & filtration efficiency. This means that our Camfil APC filter plates can be used for the dedusting of a variety of industrial manufacturing processes and dust types.
